

Integrating Technology in Service Learning

This course explores integrating technology into the curriculum, specifically through service learning. Participants will assess their school's available technology, their classroom's current service-learning opportunities, and their local community needs. Using available technology and appropriate content and faith integration, participants will develop a service-learning project that can be implemented in their own classrooms and/or shared with other educators.

Available for 1 graduate academic credit through Andrews University (\$150 fee paid to AU).
